Even high school students are enthralledBy DinesenI use these as birthday cards for my Soph. and Jr. English students and, seriously, they bring them to class every day. Luck of the draw, I now have one class of 10th graders with 3 robots poised precariously on their desks. I have even had an ex - student (a Sr.) ask for one. I must admit to being somewhat sexist as I give Terada's "Creative Creatures" to my female kids. These are not cheap, but the reward is worth it.0 of 0 people found the following review helpful. Good quality tooBy JOTMy granddaughter LOVES these robots! Good quality too!0 of 0 people found the following review helpful. very unique giftBy Kelly DruryI have just ordered 7 more books to keep on hand for gifts as I've already given away 8.Discovered this book when I bought it for my son. He was 3 or 4 when he got it. He's turning 6 now. He brought it in for "show N share" at school and the teacher wanted my ordering info. Mothers have made it a point to let me know that the book was the coolest gift they have received or even seen in a very long time. My 8 year old son loves it too!

Have you ever dreamt of acquiring the most amazing collection of robots? What about being able to take them apart and rebuild them to bring the machines of your imagination to life? Well, here's your chance. This box-set includes fifteen different robot templates designed by Roger Fawcett-Tang, twelve of which have been illustrated and customized by a different trend-setting artist. Though varying in shape, the parts are interchangeable. Three blank DIY sheets also allow you to customize the templates with your very own designs. For robot obsessives of all ages, this playful but also intensely desirable object should become a collector's item in no time. Make sure you buy more than one set, and put at least one aside for the future. They may not change the course of technology or space travel, but

they will certainly form a colorful and animated line-up on your shelf.
