**Peter Jones : Making Model Buildings for Garden Railways** before purchasing it in order to gage whether or not it would be worth my time, and all praised Making Model Buildings for Garden Railways:

4 of 4 people found the following review helpful. Pleasant Surprise! By M. L. Ness We were surprised at the quality and quantity of information in "Making Model Buildings for Garden Railways". We have had garden railway trains for years but have not had the time to actually put buildings up. This was a perfect choice for all the ideas it provides and ideas we had never thought of or seen before, even though we have attended several national and other garden railway shows in the Midwest and in the Eastern part of the country. We would highly recommend this book to anyone who is looking for inventive ways to build their railway without spending a fortune. 1 of 1 people found the following review helpful. New wrinkles on some methods By Hi mtn maker Peter Jones has been a favorite of mine. If you model British railways and do not live in the UK, this book may be adequate for you. It filled the bill for me for a few projects on a minimally themed British electric powered garden railway. 1 of 1 people found the following review helpful. Making

Model Buildings for Garden Railways is a must have for your building of G-Scale Garden. By Richard Naylor I was looking to building some large Model Buildings for my Garden Railways, This book is a real help in putting your buildings on the garden. I think you would really make use of it.

Whether making buildings to complement a garden railway, creating an entire model village, or simply one stand-alone structure, there is something immensely satisfying in seeing your model building standing proudly outside where it truly belongs, in all weather conditions and throughout the seasons. Here, Peter Jones shows you how to make a variety of buildings, from churches to Tudor houses to locomotive sheds, using different materials and producing different finishes to suit each type of construction.

About the Author Peter Jones has been addicted to railways, and modelling them, for as long as he can remember. In 1949 he took his first hesitant steps in garden railways, in 16mm scale running on 0 gauge track. He began an apprenticeship in modelling that has led to his extensive work in the railway scene. Peter has written widely on the subject, including a long-running column in Garden Railway magazine. His previous book, Practical Garden Railways, was also published by Crowood in 2006. Peter has his own website at [www.comptondown.co.uk](http://www.comptondown.co.uk). Peter Jones built his first crude 16mm scale garden railway in 1949, the first manifestation of what was to become his famous Compton Down Railway. He wrote extensively about his hobby, including the world's longest running garden railway column in Garden Railways magazine, and was highly sought-after as a speaker and competition judge. He was also a conservation technician for museums and helped with the rescue of engineering items. He wrote two previous books for Crowood, Practical Garden Railways and Building Small Steam Locomotives. He sadly died before finishing this book, which has been completed by his daughter Kes Jones with the help of many of Peter's friends.
