Jeff Nugent, Julia Boniface : Permaculture Plants: A Selection before purchasing it in order to gauge whether or not it would be worth my time, and all praised Permaculture Plants: A Selection:

0 of 0 people found the following review helpful. Useful as a starting point By Kindle Customer A decent start off point for searching for plants to work with. It does contain a little that I don't understand yet, but I'm sure I will understand as I progress. There is a great deal of information for many plants, but there is also a lot of plants listed that have no supporting info. If you can get this as a physical book do so because I'm almost sure that it is presented better than the Kindle version which show the pics poorly and you can't use the index because of the way that page information is configured in the Kindle system. Since this is reportedly the only books that lists a number of plants to use in the permaculture system (for North America), I would recommend this book...until I find something better. 0 of 0 people

found the following review helpful. Planting for Everyone By Shirley Some very useful information regarding how to plant and what to plant in order to help nature, yourself and animals. 11 of 12 people found the following review helpful. No photos...just technical jargon By Andrea Davis I was very disappointed when I received this book. There are no photos or even paragraphs...Just a directory of summarized botanical information about plants...The plants listed don't even have drawings or anything that would allow you to know what plant is being described (if you aren't already familiar with the plant). Unless you are looking for a boring botanical directory, this is not the book for you. I didn't find the book very helpful at all. Sad.

This is an easy-to-use guide to selecting hundreds of perennial species. It is indispensable for growers and designers working in subtropical and warm temperate/arid climates, and also includes some cool-climate tolerant species. Permaculture Plants: A Selection details hundreds of common and unusual edible, medicinal, and useful plants.

About the Author Jeff Nugent was born in Perth, Western Australia, and moved to Nannup in 1975. He is a founding member of the Sustainable Agricultural Research Institute (SARI). He holds a degree in permaculture. Julia Boniface moved to Nannup, Western Australia, in 1989, after completing a degree in agriculture at London University. She holds a certificate in permaculture design, and now works as a permaculture designer and lecturer with SARI.
